running'match_patterns' against '#{ARGV[0]}'" Q: Can I have multiple Fragments in one activity and still differentiate
between them? I have an activity with two fragments. Both of the fragments have their own views in the layout, but I want
them to be shown on top of each other. For example, I might have a login fragment and a home fragment in one activity.
Now, what I want to do is separate them out into two separate activities. Now if I create a new activity, I can no longer have
both the fragments in it. So my question is, can I have two fragments side by side in one activity? One way I can think of is
to just let the activity hold a reference to both fragments and then detect which one of them is visible. But is there some
kind of API for doing this? If not, what is the best way to separate out the fragments? My main concern is that they have
several layout files that reference each other. A: Just set the fragment layout files in the second activity as well. That way
when you put the login activity as a child activity, the login fragment is already inflated. So, it should work. You can also
use a se
